Leadership Team Mission Statement:

The elimination of injuries and the creation of a safe work environment for our employees and our subcontractors is a core value at Rudolph and Sletten!

The Safety Leadership Team's (SLT) mission is to motivate, advocate, educate, initiate, communicate, monitor and maintain programs, practices and policies to ensure safe work practices that will prevent all injuries in the office, on the road, and on the jobsite. The SLT is a cross departmental group whose role is to train and encourage every R & S employee to ensure they understand the risks associated with the work they do and have the necessary tools, training and education to perform each task safely. The SLT will lead the company's efforts to create and maintain a culture wherein every employee is encouraged to have a passion for Safety.

The SLT will develop and implement methods to identify leading indicators and root causes of injuries, proactively identify hazards common to our industry (and more specifically to our employees), so that Rudolph and Sletten can take a proactive approach to eliminate injuries and incidents before they occurs. The SLT will provide timely communication to our employees of any improvements to our existing safety program, codes and standards so that every employee has the necessary tools to be safe.

Through education and training we will ensure that Safety continues to be an essential component of Rudolph and Sletten's Corporate Culture to keep us the Safest and the Best.

SUCCESSES!

- For the amount of tradespeople on site, PPE is great! Hard hats, safety glasses, face shields, welding hoods, ear protection, respirators, class two vests/shirts, foot protection, hand protection, & fall arrest equipment are all being used properly.
- Various pre-tasks are conducted on a daily basis to include crane activity, hoisting of equipment, welding, torch cutting & burning, fall protection, concrete placement, concrete pump, forklift rigging, forklift material handling, pressurized piping, & scaffold erection.
- As always, awesome fall arrest systems in place & properly used. Especially Herrick connectors, bolt up crew, plumb up crew, safety rail crew, & welders. Also Morley, UMEC, Clark Pacific, Anning Johnson, & Surf City Steel.
- The jobsite is extremely clean & organized. Great job to the R&S laborers assisting with the housekeeping throughout the site to include interiors & exteriors.
- There have been three successful crane jumps for all three Luffing cranes & three successful jumps for all four personnel hoists.
- Rigging practices observed were done in accordance with safe rigging practices, great job to all involved.
